System Requirements:

Before you begin the installation process, ensure that your system meets the following requirements:

- Web Server: Apache, Nginx, or similar
- PHP: Version 8.1 or higher
- Database: MySQL 5.1 +
- MySQLi PHP Extension
- PDO PHP Extension
- cURL PHP Extension
- OpenSSL PHP Extension
- GD PHP Extension
- allow_url_fopen enabled
- Web Browser: Latest versions of Chrome, Firefox, Safari, or Edge

Installation Steps:

Follow these steps to install the web application:

1. **Download the Application**:
   - Obtain the latest version of the application from GitHub or designated repository.
2. **Extract Files**:
   - Extract the downloaded ZIP file to your desired location on your web server.
3. **Configure Web Server**:
   - Configure your web server to serve the application files.
   - For Apache: Place the extracted files in the document root directory (e.g., `htdocs`).
   - For Cpanel: Place the extracted files in the document root directory (e.g., `public_htnl`).
4. **Database Setup**:
   - Create a new MySQL database for the application.
   - Import the provided SQL file to set up the necessary database tables and schema.
5. **Environment Configuration**:
   - Locate the `config.php` files in the application directory.
   - Configure the database connection settings (DB_SERVER, DB_USER, DB_PASS, DB_NAME) according to your database setup.

```
6. define('DB_SERVER','localhost');
7. define('DB_USER','root');
8. define('DB_PASS' ,'');
9. define('DB_NAME', 'insurance');
10.$con = mysqli_connect(DB_SERVER,DB_USER,DB_PASS,DB_NAME);
```

1. **Change Document Routes**
   - Locate the `comprehensive.php` files in the application directory. Change `'http://localhost/dev.thirdparty` to actual file path.

```
2.  var folderPath = 'http://localhost/dev.thirdparty/
```

3. **Set Permissions**:
   - Ensure that the web server has appropriate permissions to read and write to necessary directories within the application.

4. **Application Initialization**:
   - Access the application URL in your web browser.
   - Follow the on-screen instructions to login to the system.
   - Administrator Username : admin | Password : Ad@421359

Configuration Options:

- **Create Staff Member**: Settings > Staff > Add New Staff Member
- **Create or Change Product:** Settings > Products
- **Add or Edit Branch**: Settings > Branches
- **Grant Access for branches**: Settings > Permission (select a username and branches and then click save)
- **Security Settings**: Configure security features such as HTTPS, CSRF protection, etc.
- **Backup and Restore**: Implement regular backup strategies and configure restore options.

Dashboard Features:

Once the installation is complete, users can access the dashboard

- Product name and Premium
- Transaction Overview
- Total Transaction Count, Daily Transaction Count,Total Products and Total User Count (branch)
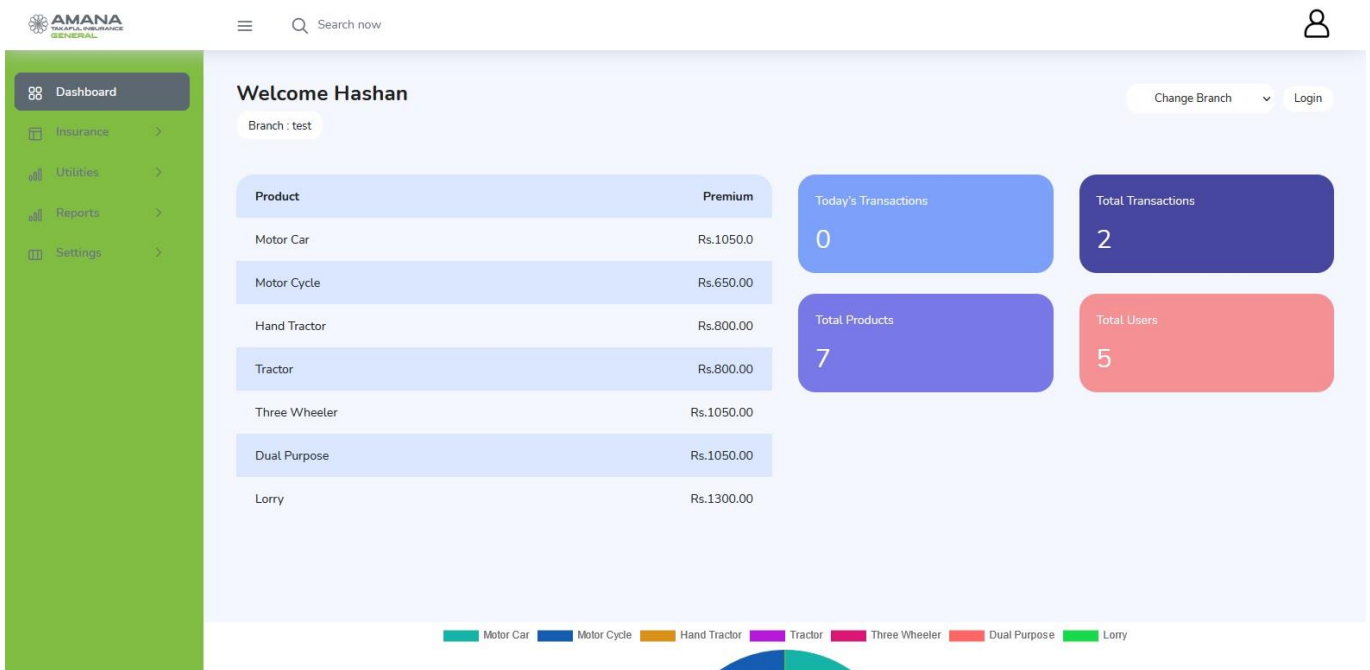

To Issue Cover Note:

Navigate to cover note page from the main menu on the left and click on the button third party.

To Issue Insurance Card:
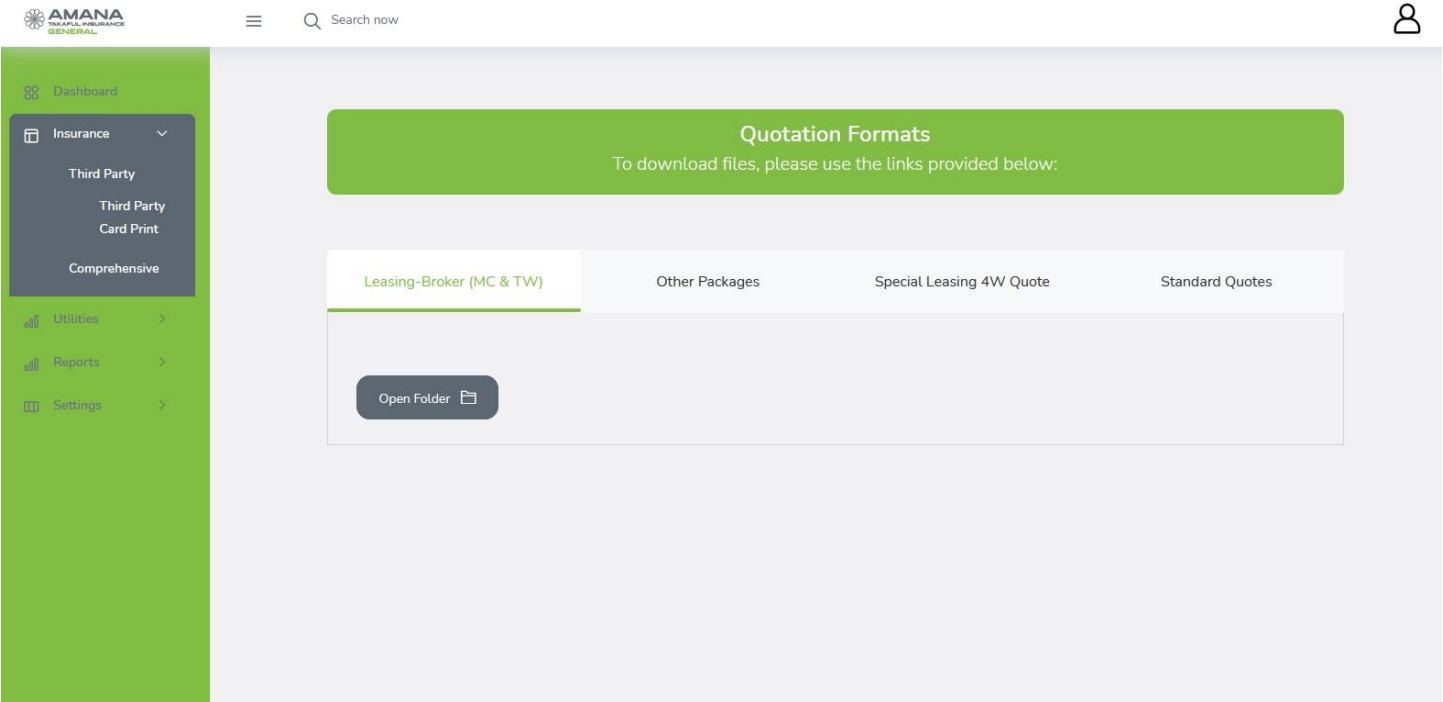

Navigate to card page from the main menu on the left and click on the button card print.
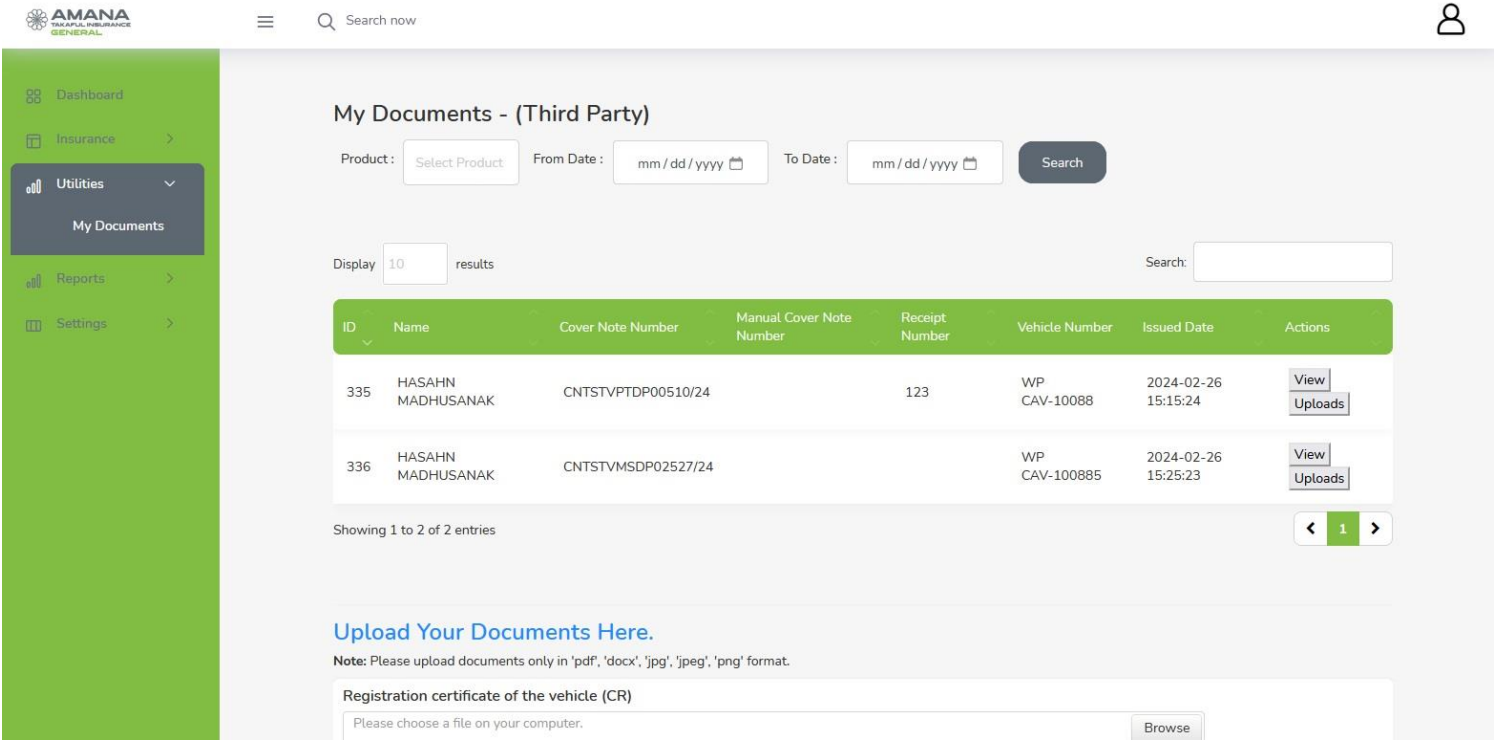

To Download Quotation Formats:

Navigate to comprehensive page from the main menu on the left and click on the button comprehensive

To Upload Documents:

Navigate to dosuments page from the main menu on the left and click on the button My Documents.

Troubleshooting:

- **Check Error Logs**: Inspect web server error logs for any issues during installation or operation.
- **Permissions**: Ensure correct file and directory permissions are set for the web server.
- **Database Connection**: Double-check database credentials and connection settings in the `config.php` files.
- **Dependencies**: Verify that all required PHP extensions and libraries are installed.

Support:

If you encounter any difficulties during installation or configuration, please refer to our documentation or contact our support team for assistance.
